ASSIGNMENT-14

TASK 1: AI-ASSISTED PERSONAL PORTFOLIO WEBSITE

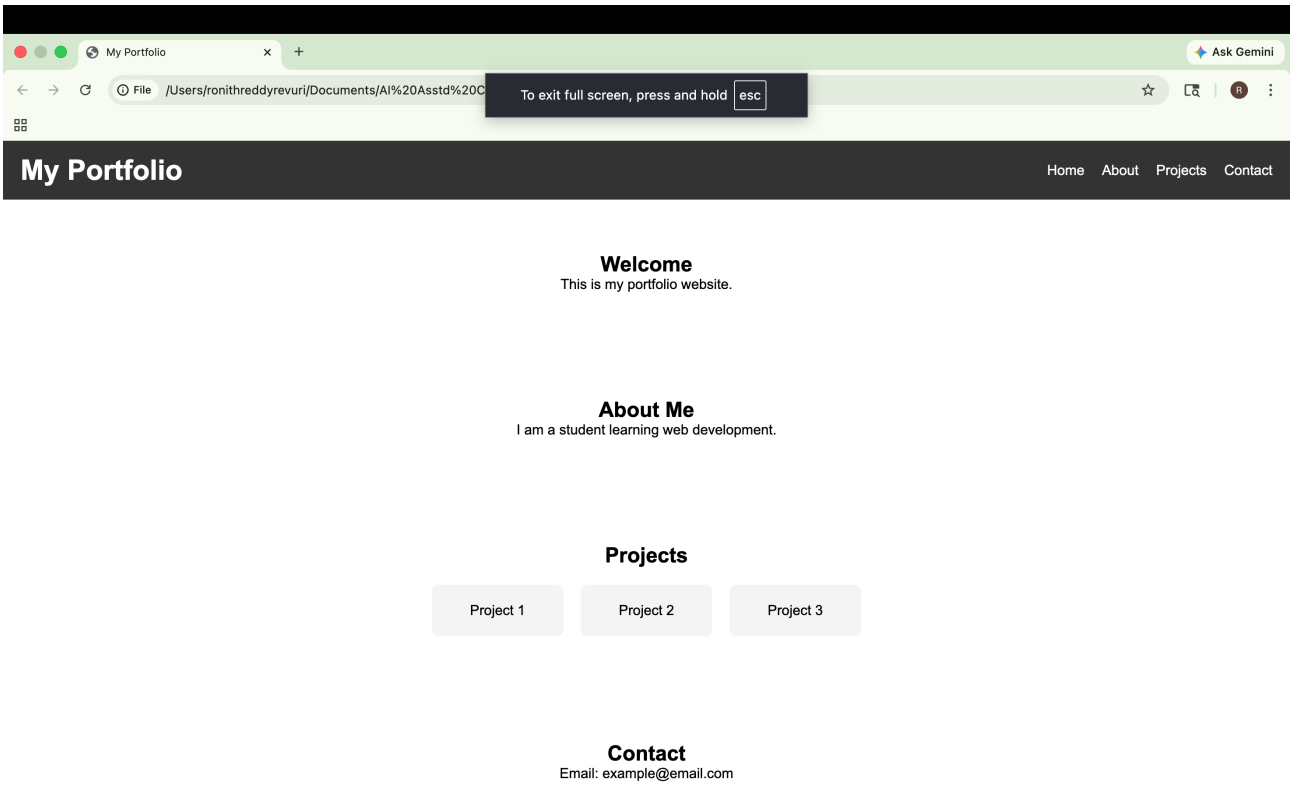
PROMPT :
GENERATE A SEMANTIC HTML PORTFOLIO WEBSITE WITH SECTIONS: HOME, ABOUT, PROJECTS, AND CONTACT.
ADD RESPONSIVE CSS USING FLEXBOX. INCLUDE HOVER EFFECTS ON PROJECT CARDS AND SMOOTH SCROLLING NAVIGATION.

EXPLANATION :

. This task I use tools like GitHub Copilot to create my personal portfolio website.

My website has sections:* Home ,* About , * Projects ,* Contact

I use HTML to organize my content. I apply CSS to make my design work well on devices using Flexbox.



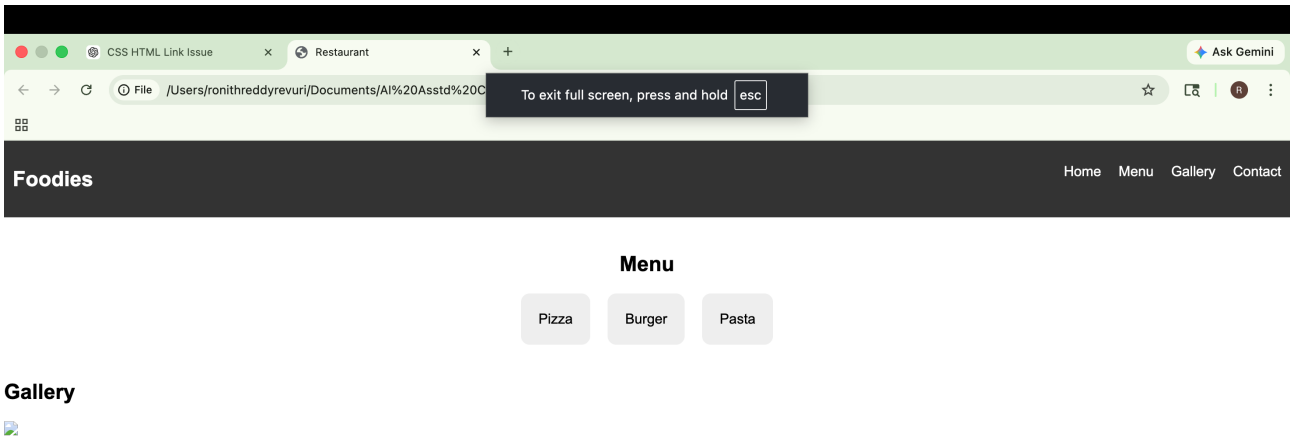
Task 2: AI-Generated Restaurant Landing Page

Prompt :

Create a restaurant landing page with a navigation bar (Home, Menu, Gallery, Contact). Design a menu section using CSS cards and implement an image slider using JavaScript with smooth transitions.

Explanation :

The website has a navigation bar that helps you quickly find sections like the Menu and Gallery.The menu items are designed as cards using CSS to make them look appealing.The artificial intelligence helps design the restaurant landing page.The menu and gallery sections are easily accessible.CSS is used to make the menu items look good.The restaurant landing page is designed using intelligence.



Task 3: AI-Powered Event Registration Form

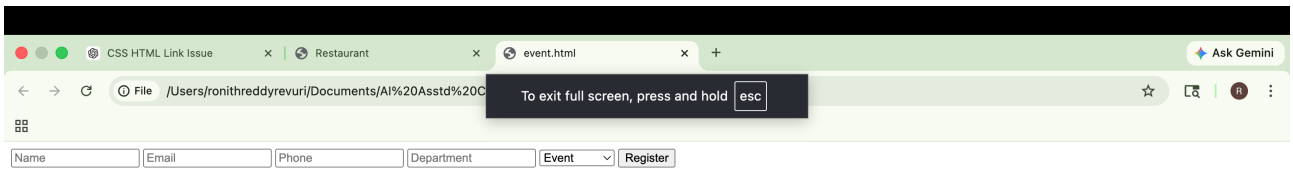
Prompt :

Generate an HTML form with fields: Name, Email, Phone Number, Department, and Event Selection.

Add CSS styling and JavaScript validation for email format, phone number length, and required fields.

Explanation :

We need to make a form for people to sign up for an event. The computer uses a program to create the basic layout of the form using HTML. Then we add CSS to make the registration form look nice and easy to use for the event.



Task 4: AI-Assisted E-Commerce Product Page

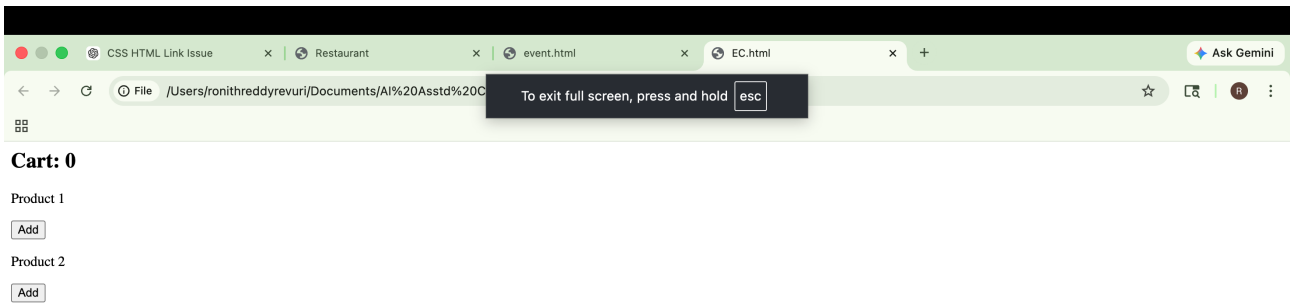
Prompt :

Create a product catalog using HTML and CSS Grid.

Implement an Add to Cart feature using JavaScript with a cart counter and visual feedback when items are added.

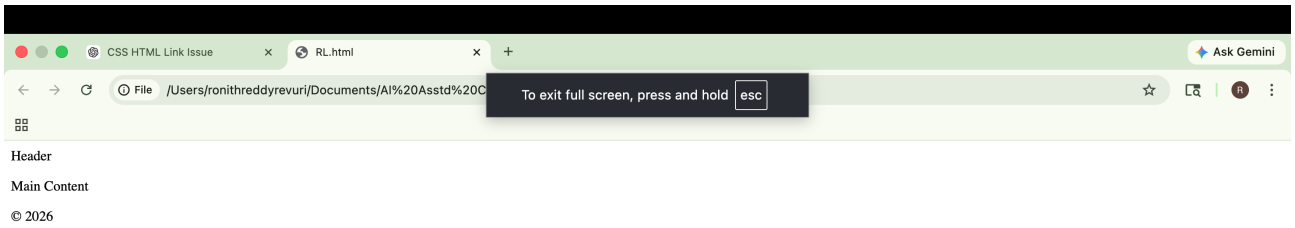
Explanation :

In this task we create an e-commerce product page with the help of AI.Products are shown in a grid layout using HTML and CSS.We use JavaScript to add an "Add to Cart" button.When users click the button they can add items to their cart. See the cart count go up.The product page is made using AI assistance.



TASK 5: RESPONSIVE WEB PAGE LAYOUT

PROMPT :
DESIGN A RESPONSIVE WEB PAGE WITH A HEADER, MAIN CONTENT SECTION, AND FOOTER. USE CSS FLEXBOX OR GRID FOR LAYOUT AND ENSURE IT ADAPTS TO DESKTOP, TABLET, AND MOBILE SCREENS.

EXPLANATION :


This task is about making a web page that looks good on any device.The page has a part with links, a middle part with content and a bottom part.We use CSS tricks, like Flexbox or Grid to make sure the layout changes correctly on phones, tablets and computers.Some tools help us write CSS that works well on devices so we can make web pages that adapt easily.
